ORIGINATORS OF
CHOICE NEW VARIETIES

NATHAN HALE—FD. The ideal Commercial Bronze. We have selected this dahlia as the best of all the deep Autumn shades for cutting. In habit of growth it is exceptionally robust, insect repellent and free from disease. Planted as a garden variety without pinching back it makes a well shaped plant about 6 feet in height with a great profusion of bloom. For exhibition and cutting purposes plants grown either from tubers or from cuttings and pinched back to two or three pairs of laterals will produce large perfect specimens on long, stout stems. It requires a moderately long growing season and for best results should not receive an excess of water or fertilizer after coming into bud. We can recommend Nathan Hale highly as a leader in the cut flower field as well as a popular exhibition and garden variety profitable to the grower. Originators stock, grown from tubers—75c each, \$60.00 per 100 tubers.

ROSEATA—FD. This excellent pink decorative, the second variety of our introduction to win the Darnell Trophy of the American Dahlia Society, awarded for the best commercial dahlia, is by far the best keeping dahlia we have ever grown. In this respect it surpasses even those great favorites, Sagamore and Jersey's Beauty. In habit of growth it may be considered to have attained that rare degree of perfection possessed by so few dahlias. Plants pinched back when young will develop six long, slender very stiff laterals three to five feet in length bearing huge exhibition blooms. When these are cut other branches shoot up from the ground and continue to bear blooms until killed by frost. A delicate shading of salmon and gold in the late season adds to the beauty of this flower. Every grower will welcome Roseata as a valuable addition to his collection and as a variety setting a higher standard of usefulness for the dahlia. While grown for several years by us Roseata is now offered for the first time to the trade and should not be confused with several other dahlias sold under similar names. Originators stock, grown from tubers—\$2.00 each, \$175.00 per 100 tubers. Both of the above varieties have received the Certificate of Merit of the American Dahlia Society.

MARY BOND—FD. Recommended for exhibition and the garden. The plants are sturdy in growth, four to five feet and are free bloomers with heavy, stiff flower stems. Blooms are 7 to 8 inches in diameter and of the conventional decorative type. The petals, cream with soft rose or peach reverse, are slightly quilled near center of bloom gradually flattening out towards the outer edges. This gives a delightful effect of blending and shading colors that will be especially appreciated by those who remember the beautiful blending of colors in the dahlia, Judge Marean. 60c each, \$50.00 per 100 tubers.

MISS HUNTINGTON—FD. This is a dahlia of good habit and strong growth. The blooms, less formal in type than Mary Bond, are of a dazzling scarlet. It makes a good garden and exhibition variety as the blooms have size and the color stands out brilliantly among the many common shades of red. 60c each, \$50.00 per 100 tubers.

BETTY LEE—FD. A pleasing and delightful combination of pink and white blending to give a true apple blossom effect. The plant is a clean, strong grower, about six feet in height and is very satisfactory and showy in the garden being exceptionally healthy and a free bloomer. This is a color needed in every collection and is much admired in our show gardens. 75c each, \$60.00 per 100 tubers.

RED GIANT—FD. As the name implies this is really a giant dahlia. Under favorable conditions the plants attain a height of eight feet and are sturdy in proportion. The large decorative blooms are of a rich ruby red in color and are carried on heavy stiff stems. 90c each, \$75.00 per 100 tubers.

WM. McGAUL, JR.—ID. This is recommended especially as a showy garden variety. Excellent in habit and growth and a great tuber producer. It blooms very freely on strong erect stems and makes a bank of color in the garden. The flowers are of the informal decorative type and of a light amber autumn shade. 75c each, \$60.00 per 100 tubers.
